

## 7.1 Discrete and Continuous Random Variables

Psychologist's study: 

# of puzzles solved
3 minutes
distracting jackhammer sounds

Let  $X = \#$  of puzzles completed.

$X$  has this distribution: 

$X$	0	1	2	3	4
$P(X=x)$	.3	.3	—	.1	.1

$$P(X=2)$$

$$P(X=1 \text{ or } X=2)$$

$$P(X < 2)$$

$$P(X > 1)$$

$$P(X < 3)$$

$$P(X \geq 3)$$

**random variable** takes numerical values for outcome of a random phenomenon

<b>outcomes</b>	<b>values of a random variable</b>
heads or tails	# of heads
boy or girl	# of boys
spin and land on red	# of times red comes up

## discrete random variable

X has a countable # of possible values.

examples:

x heads,

x boys,

a particular color occurs x times

### Probability Distribution of X

- table, histogram, or function
- lists values & corresponding probabilities
- each probability is between 0 & 1
- sum of all probabilities = 1

pg. 395-397  
questions 1, 3, 5

### **continuous random variable**

takes on all possible values in an interval of numbers

probability distribution is a density curve

probability = area of region for values of that event

examples:

temperature at a given time,

minutes of daylight on a given day

7.8 pg. 402  $\mu = .4$   $\sigma = .023$

a.  $P(\hat{p} \geq 45\%)$

$$z = \frac{x - \mu}{\sigma}$$

b.  $P(\hat{p} < 35\%)$

c.  $P(35\% < \hat{p} < 45\%)$
